# UNLOCK EFFICIENCY AND PRECISION WITH BOXSCAN CORE LOGGING TECHNOLOGY

AXIOM GROUP is proud to be the exclusive Canadian provider of BoxScan, an advanced multi-sensor core logging system that revolutionizes how we approach geological exploration. Developed by Geotek, this system is designed to meet the high demands of modern mining projects and offers unparalleled speed, accuracy, and consistency.

KEY ADVANTAGES OF BOXSCAN:

- **Rapid Data Collection:** BoxScan enables quick, in-field data acquisition, essential for real-time decision-making. It provides fast, accurate datasets, perfect for projects requiring immediate action.
- **Resource Efficiency:** With BoxScan, minimal staff can effectively operate the system, reducing personnel needs and associated costs.
- **Non-Subjective Data:** Utilizing integrated sensors, BoxScan captures reliable, consistent data without human bias, eliminating the need for re-logging and ensuring high-quality outputs across projects.

- **Standardized Outputs:** The system generates data in a uniform, non-proprietary format, enhancing data consistency across various projects and teams.
- **Enhanced Project Speed:** BoxScan accelerates the transition from discovery to production, supporting faster project timelines, reducing overall costs, and improving return on investment.
- **Advanced Data Management:** BoxScan stores data digitally, either on-site or in the cloud, creating a comprehensive, easily accessible digital archive for seamless collaboration.
- **Data Density and Precision:** The system captures high-density data points, offering detailed insights into geological formations, customizable to project needs.
